

# ZEMITS ELECTROPORATION

## No-Needle Electroporation Deep Skin Hydration

Electroporation, or Needle-Free Skin Hydration, is an advanced treatment that uses gentle pulses of electrical current, opening the pores for milliseconds to penetrate serums into the deeper dermal layers. This technology is perfect for skin hydrating treatments.

- Firmness and hydration of the skin in the face, neck and décolletage make a rejuvenation effect with no-needle mesotherapy treatment. Zemits Verstand HD directs electrical impulse that delivers the nourishing liquid with vitamins into the cells.
