

ZEMITS EYE & LIPS TREATMENT

Electroporation is a non-invasive cosmetic procedure that uses electrical pulses to temporarily create small pores in the skin, allowing for better absorption of topical products.

The Eye & Lips Treatment is based on the gentle electrical pulses that infuse serums into the deep dermal layer and boost collagen and elastin production, and infuse topically applied serum.

The perfect spoon-shaped elegant tool is designed for precise and targeted treatment around the eyes and lips.

- Aestheticians effectively use it to hydrate and firm skin around the eyes and lips.
