

ZEMITS TECHNOLOGIES IN DETAILS – HYDRODERMABRASION

Fluid HydroDermabrasion is the new and improved HydroDermabrasion Facial.

It is a non-invasive, non-dripping, and non-costly skin-resurfacing treatment. There are no longer jars, which means more controlled treatment; no serum overuse, and no more dripping serum.

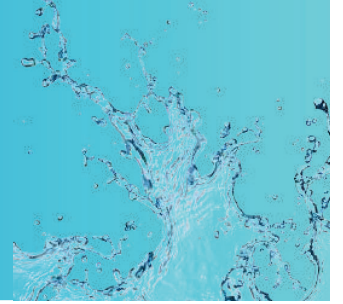

The unique Fluid Hydro Dermabrasion is an advanced treatment that enables better Hydro Exfoliation & Extractions of blackheads and clogged pores.

The result after 5 treatments

- Improved skin tone
- Soften nasolabial fold
- Reduced under-eye wrinkles
- More even skin tone

BENEFITS OF HYDRODERMABRASION

The unique Fluid Hydro Dermabrasion is an advanced treatment that enables better hydro exfoliation & extractions of blackheads and clogged pores. Esthetician applies HydroDermabrasion serum over face, neck and decollete with a fan brush.

Only 5 ml of active serum is needed to perform the entire Fluid HydroDermabrasion session. This way serum is partially absorbed by the skin and reacts with the skin on deeper layers.

The Dual Diamond Tips have a specific shape and twice larger abrasive surface compared to regular dry or hydromicrodermabrasion to improve exfoliation process; and twice smaller vacuum opening to reduce vacuum suction and prevent skin overstretching.

The Gentle Exfoliation Ruffle Tips are diamond-free, these tips are designed to perform Fluid HydroDermabrasion on sensitive and acne skin. Abrasion-free surface allows gentle superficial exfoliation.

The Clear Extraction Tips have smooth edges and transparency that allows fluid gliding over the opened skin pores and pain-free deep extractions of sebum from pores. After this step skin became visually cleaner and brighter with the effect of "empty" pores.
