

ZEMITS TECHNOLOGIES IN DETAILS – RADIOFREQUENCY

RF is very effective treatment for treating loose skin and wrinkles and to achieve rejuvenation and tightening effects on the skin.

The Zemits RF modality helps to:

- increase tissue-oxygen supply
- accelerate cell metabolism
- stimulate collagen regeneration
- Increase the production of elastin and hyaluronic acid.

The Zemits RF technology uses currents similar to the ones found naturally in our body's electrical circuits to cause tissues to contract, which in turn safely tighten skin and increase its contour.

Because of the ability of RF to reach the dermal layer of the skin, the facial skin is made firmer while existing collagen fibers are strengthened and the production of new collagen proteins are stimulated.

This is impactful because aging degrades collagen proteins found naturally in our skin, and regenerating collagen production is the key ingredient to tightening and regaining youthfulness in mature skin.

ZEMITS RADIOFREQUENCY

The Zemits Verstand RF handpieces were crafted for precise skin tightening treatments of the face, neck, and décolleté.

Its specific configuration also allows performing safe and very deep treatment focused on improving the appearance of body scars and stretch marks.

The safe RF structure with a flat surface and 2 circular RF electrodes allow comfortable and safe skin treatment even with partial contact with skin when the majority of RF devices on market might overheat the skin easily.

ZEMITS FACIAL RF HELPS TO:

- Lift and slim double chin
- Contour jawline area
- Reduce eye dark circles and puffiness
- Lift up eyebrows
- Diminish the appearance of crow's feet and nasolabial folds
- Increase healthy cell formation
- Reduce stretch marks
- Promote collagen production
- Make skin tighter and more lifted

*we recommend to perform the RF treatment with Zemits FirmingGenius Conductive Gel
